

Troubleshoot Guide

Staining

Stains can be caused by different foods, illnesses, medications, etc. Fortunately, stains do not affect the functionality of your FuzziBunz®.

To remove stains (if desired), we suggest laying the diapers and inserts out in the sun for several hours at a time (several times for tough stains). OxiClean® can be used on a regular basis for the diapers and inserts.

A small amount of bleach may be used on the inserts only. Start with a 1/2 tablespoon of bleach and increase as needed depending on the amount of inserts you are washing and if you have an HE washing machine.
